

Process Area	AS-IS	TO-BE	Gap	How to addressed
Application Completeness Check	Missing info caught only during manual review, after submission	Automated completeness check runs at point of submission	No validation logic exists at intake, depends entirely on reviewer's noticing	Application Tracking
Missing Documnet Follow- up	Informal, untracked email. messages follow-up by individual reviewer	Auto generated tracked request with reminder schedule	No structured request/ reminder workflow exists	Document Management
Application Tracking & Visibility	Fragmented personal/team spreadsheet; no single source of truth	Centralized tracker, visible to Operations and customers	No shared application-state data model exists	Application Tracking
SLA Monitoring	48h estimate is not measured, requires manual pull from 3 trackers to verify	Automated per stage SLA timer, reportable in real time	No consolidated, systematic time tracking mechanism exists	SLA Tracking
Exception Classification	No defined taxonomy, case by case analyst judgement	Rules based classification against a defined exception taxonomy	Exception criteria were never codified into rules	Exception Management
Exception Assignment	Self selected from shared queue; same anaysts take "easy" cases	Auto assigned by workload, with 2h analyst override window	No routin/ assignment logic exists	Exception Management
Exception Resolution and Audit Trail	Ownership/ reasoning inconsistently documented	Mandatory owner, timestamp and reason captured at resolution	No system enforcement of documentation requirement	Exception Management
Customer Status Communication	No visibility between submission and final decisions	Real time status visible to customer at every stage	No customer facing status channel exists	Application Tracking
