

Business Requirements Document

Digital Loan Applications and Exception Management

Field	Detail
Document Owner	Carol Felix, Business Analyst
Sponsor	Senior Management
Version	1.0
Client/ Organization	FinNova Digital Finance
Product in Scope	Personal Loan

Purpose

This BRD defines business requirements for FinNova's digital loan application, tracking, and exception management solution. Requirements are organized into 4 pillars - Application Tracking, SLA Tracking, Document Management, and Exception Management, and each is traceable to a specific gap identified in the Gap Analysis and a root cause identified in Pain Points & Root Cause.

Business Background

FinNova's digital loan platform captures applications digitally, but everything downstream from completeness checking, SLA monitoring, document followup, and exception handling remains manual. This produces avoidable delays, inconsistent exception handling, no verified SLA baseline and no customer status visibility(see Elicitation Notes and Pain Points & Root Cause for full evidence)

Business Objective

1. Give every application automated completeness validation at submission.
 2. Provide centralized, real time application tracking for Operations and customers.
 3. Track SLA per process stage, with no automated at-risk alerts.
 4. Automate missing documents follow-up with a reminder schedule.
 5. Auto classify and auto assign exceptions against a defined taxonomy, with mandatory audit trails.
-

Scope

In scope : Application completeness checking, centralized tracking, per - stage SLA monitoring, automated document follow up, exception classification/ assignment/ resolutions, customer status notifications, audit trails, basic reporting.

Out of Scope: Credit scoring, automated underwriting, actual disbursement, payment processing, core-system integration, fraud detection, AI-based decisioning, Auto Loan/other product lines from Phase 2.

Stakeholders

See Stakeholder Register. Primary sources: Operations Manager, Credit Analyst, Compliance, Product Manager.

Requirements — Organized by Pillar

Pillar 1 : Application Tracking

Req.ID	Requirement	Priority
BR-01	System shall run an automated completeness check on all mandatory field and documents at submission	Must Have
BR-02	System shall maintain a centralized application record visible to Operations, replacing individual trackers	Must Have
BR-03	Customers shall be able to view real time application status at every stage	Must Have

Pillar 2 : SLA Tracking

Req.ID	Requirement	Priority
BR-04	System shall run an automated SLA timer per process stage(review, document collection, exception resolution)	Must Have
BR-05	System shall alert the owning team when a stage SLA is at risk (default threshold:24h)	Must Have
BR-06	Operations shall have a reportable, real time SLA dashboard (no manual data pulling required)	Should Have

Pillar 3: Document Management

Req.ID	Requirement	Priority
BR-07	System shall auto generate a tracked request when required documents/ fields are missing	Must Have
BR-08	System shall send automated reminders on a defined schedule until missing items are resolved	Must Have
BR-09	Applications with documents overdue beyond a defined threshold shall auto escalate to Operations	Should Have

Pillar 4: Exception Management

Req.ID	Requirement	Priority
BR-10	System shall classify exceptions against a defined taxonomy, developed jointly with Credit Analyst input	Must Have
BR-11	System shall auto-assign exceptions by analyst workload, with a 2-hour manual reassignment window	Must Have
BR-12	System shall require a mandatory owner, timestamp, and resolution reason on every exception, stored immutably	Must Have
BR-13	Notification detail shown to customers on flagged exceptions shall be reviewed and approved by Compliance before go-live	Must Have

Success Metrics / KPIs

Metric	Baseline	Target	Pillar
Average processing time	48h(unverified estimate)	24h	1,2
Applications processes within SLA	Not tracked	>=95%	2
Exceptions with assigned owner	Inconsistent	100%	4
Status related customer inquiries	Baseline TBH	Reduced by 30%	1

Assumptions & Constraints

Per Project Charter, synthetic data, simulated stakeholders, no production deployment, conceptual integration only.

Risks

Per Project Charter, plus BR-13 remains an open item between Product and Compliance and must be resolved before FRD finalization, carrying risk if not closed in time for Phase 1 build.
