

Story ID	Epic	User Story	Acceptance Criteria	Priority
US-01	Application Tracking	As a Customer, I want the system to check my application for missing information at submission, so I know immediately if something is incomplete	Given a submitted application missing a required document, when I submit, then I see a specific list of what's missing before the application is accepted into the queue	Must Have
US-02	Application Tracking	As a Operations team member, I want one centralized application record instead of separate trackers, so I always see the current, accurate status	Given an application's status changes, when any team member views the record, then they see the same current status;	Must Have
US-03	Application Tracking	As a Customer, I want to check my application status online at any time, so I don't need to contact Support for updates.	Given I have a valid application reference number, when I check status, then I see one of: Submitted, Under Review, Additional Info Needed, Exception Under Review, Approved, Rejected with a last-updated timestamp.	Must Have
US-04	SLA Tracking	As an Operations Manager, I want each process stage to have its own SLA timer, so I can see exactly where delays are happening.	Given an application enters the Review stage, when the stage timer starts, then elapsed time for that specific stage is tracked and stored independently of other stages.	Must Have
US-05	SLA Tracking	As an Operations Manager, I want to be alerted before an SLA is breached, not after, so my team can act in time.	Given a stage SLA reaches 80% of its threshold, when the alert fires, then it's routed to the assigned owner, and to me directly if no owner is currently assigned.	Must Have
US-06	SLA Tracking	As an Operations Manager, I want a real-time SLA dashboard, so I don't have to manually pull data from multiple trackers to report on performance.	Given I open the dashboard, when I filter by date range, then I see applications by stage, time-in-stage, and breach count, refreshed at least every 15 minutes.	Must Have

US-07	Document Management	As a Customer, I want a specific, clear request when something's missing, so I know exactly what to upload.	Given my application is flagged incomplete, when the request is generated, then it names the specific missing item (e.g., "Proof of Address"), not a generic message.	Must Have
US-08	Document Management	As a Customer, I want reminders if I forget to respond to a document request, so my application doesn't stall silently.	Given a document request is unresolved, when the reminder schedule fires (24h/72h/120h), then I receive a reminder; and reminders stop automatically once I upload the item.	Must Have
US-09	Document Management	As an Operations Officer, I want overdue document requests escalated to me, so applications don't sit indefinitely.	Given a document request remains unresolved past 120 hours, when the threshold is reached, then the application is escalated to Operations for manual outreach.	Should Have
US-10	Exception Management	As a Credit Analyst, I want exceptions classified against a defined taxonomy, so handling is consistent across the team.	Given an application is flagged as an exception, when it's evaluated, then it's assigned a category and severity from the defined rule set or "Uncategorized — Manual Review" if no rule matches.	Must Have
US-11	Exception Management	As a Credit Analyst, I want exceptions auto-assigned by workload, but with room to take a case myself if I have relevant context, so cases don't sit with the wrong person.	Given an exception is classified, when it's auto-assigned to the analyst with the lowest open-case count, then any analyst may reassign it to themselves within a 2-hour window.	Must Have
US-12	Exception Management	As a Compliance Officer, I want every exception resolution to have a mandatory owner, timestamp, and reason, so we have a defensible audit trail.	Given an analyst resolves an exception, when they submit the resolution, then a reason (minimum 10 characters, not whitespace-only) is required before the record can be saved, and the entry cannot later be edited or deleted.	Must Have

US-13	Exception Management	As a Compliance Officer, I want to review and approve any customer-facing exception notification content before it goes live, so we don't create regulatory exposure.	Given a new notification template is created, when it's not yet Compliance-approved, then customers see a generic "requires additional review" message instead of specific exception detail.	Must Have
