

Item ID	Requirement/Story	MoSCoW	Reason
BR-01	Automated completeness check at submission	Must Have	Root cause of P-01; nothing downstream(tracking, SLA) works reliably if incomplete applications aren't caught at the point of entry.
BR-02	Centralized application record	Must Have	Directly resolved P-03; every other pillar depends on a single source of truth existing
BR-03	Real time customer status visibility	Must Have	Core deliverable of the customer transparency objective;
BR-04	Per stage SLA timer	Must Have	Resolves P-04(unverified baseline) without this the 24h target is unmeasurable
BR-05	At risk SLA alerts	Must Have	Operations Manager was explicit this must be proactive, not a dashboard someone has to remember to check (Session 1, Q3)
BR-06	Real time SLA dashboard	Should Have	Valuable for reporting, but the SLA timers (BR-04) and alerts (BR-05) function without a dashboard in week one;dashboard can follow shortly after
BR-07	Auto-generated tracked document request	Must Have	Resolves P-02; foundational to the Document Management pillar existing at all
BR-08	Reminder schedule for outstanding requests	Must Have	Without this, BR-07 is just a one time request, the curring followup is what actually prevents stalling
BR-09	Overdue document escalation	Should Have	Important safety net, but only triggers after the reminder cycle (BR-08) is already exhausted, later in the sequence, lower initial risk
BR-10	Exception classification against taxonomy	Must Have	Resolves P-05; Exception Management pillar cannot function without a defined taxonomy to classify against

BR-11	Auto-assignment with override window	Must Have	Resolves P-06; this was also the one requirement stakeholders actively disagreed on before reaching resolution, high attention item, not safely deferrable
BR-12	Mandatory audit trail on resolution	Must Have	This is the requirement that most directly answers the original business problem - Compliance was firm it's "non-negotiable"
BR-13	Compliance-reviewed notification content	Must Have	Elevated from what could have been a Should Have, because Compliance explicitly tied it to regulatory exposure, not just UX
-	Full self-selection model for exception assignment (no auto-assignment)	Won't Have (this phase)	This was part of the credit analyst's initial proposal, but it was replaced during the Week 6 resolution by the hybrid auto-assign and two-hour override rule.
-	Auto Loan / other product lines	Won't Have (this phase)	Deliberately scoped to Personal Loans only for the pilot, per Charter — Phase 2 candidate once pilot validates the model
-	Credit scoring / automated underwriting / fraud detection	Won't Have (this phase)	Explicitly out of scope per Charter - not a prioritization deferral, a firm scope boundary
