

| TC. ID | Req. ID | Test Scenario                                             | Steps                                                                                                                       | Expected Results                                                                                         | Actual Results                                                                                                                          | Status      |
|--------|---------|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|-------------|
| TC-01  | BR-01   | Application with missing document is caught at submission | 1. Submit application without required Proof of Address. 2. Attempt to complete submission                                  | System flags the application as incomplete and lists the specific missing item before accepting it       | Flagged correctly; specific item named as expected                                                                                      | Passed      |
| TC-02  | BR-02   | Application status is consistent across views             | 1. Update application status as Operations Officer 2. View same application as Operations Manager                           | Both views show identical, current status — no lag or divergence                                         | Status matched across both views immediately                                                                                            | Passed      |
| TC-03  | BR-03   | Customer views real-time status                           | 1. Enter valid application reference number on status page 2. Check displayed status and timestamp                          | Status shown matches internal record, with a last-updated timestamp                                      | Status displayed correctly; timestamp formatting needs a minor fix (see DEF-01 below)                                                   | In Progress |
| TC-04  | BR-04   | Per-stage SLA timer starts and stops correctly            | 1. Move application into Review stage 2. Move application out of Review stage into next stage                               | Review-stage elapsed time is recorded independently and stops when the application exits the stage       | Not yet testable — feature still in development                                                                                         | Not Started |
| TC-05  | BR-05   | At-risk SLA alert fires before breach                     | 1. Simulate a stage approaching 80% of its SLA threshold                                                                    | Alert routes to the assigned owner; if unassigned, routes to Operations Manager                          | Not yet testable — depends on TC-04 completion                                                                                          | Not Started |
| TC-06  | BR-06   | SLA dashboard reflects real-time data                     | 1. Open Operations Manager dashboard 2. Filter by date range                                                                | Applications by stage, time-in-stage, and breach count shown, refreshed within 15 minutes                | Not yet testable — feature still in Backlog                                                                                             | Not Started |
| TC-07  | BR-07   | Missing-document request is specific                      | 1. Submit application missing one required document 2. Review the generated request                                         | Request names the specific missing document, not a generic message                                       | Request correctly named "Proof of Address" as the missing item                                                                          | Passed      |
| TC-08  | BR-08   | Reminder schedule fires and stops appropriately           | 1. Leave a document request unresolved past 24h 2. Upload the requested document before the 72h reminder                    | 24h reminder sent; 72h reminder does not fire once document is uploaded                                  | Not yet testable — feature still in development                                                                                         | Not Started |
| TC-09  | BR-09   | Overdue document request escalates                        | 1. Leave a document request unresolved past 120 hours                                                                       | Application escalates to Operations for manual outreach                                                  | Not yet testable — depends on TC-08 completion                                                                                          | Not Started |
| TC-10  | BR-10   | Exception is classified against defined taxonomy          | 1. Trigger an application with a name/ID mismatch (ER-01 condition) 2. Review assigned category                             | Application is classified "Data Mismatch," severity High                                                 | Classified correctly; one test case using an ambiguous scenario returned "Uncategorized — Manual Review" as expected per ER-09 fallback | In Progress |
| TC-11  | BR-11   | Exception auto-assignment and override window             | 1. Trigger an exception 2. Attempt reassignment by a different analyst within 2 hours 3. Attempt reassignment after 2 hours | Auto-assigns to lowest-workload analyst; reassignment allowed within 2h, requires manager approval after | Not yet testable — feature still in development                                                                                         | Not Started |

|       |       |                                                                      |                                                                                                                                       |                                                                                                                                                  |                                                                                         |             |
|-------|-------|----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|-------------|
| TC-12 | BR-12 | Mandatory audit trail on resolution                                  | 1. Attempt to resolve an exception with an empty reason field 2. Attempt with a whitespace-only reason 3. Resolve with a valid reason | System blocks empty and whitespace-only submissions; valid submission is saved with owner, timestamp, and reason, and cannot be edited afterward | Both invalid attempts correctly blocked; valid resolution saved and confirmed immutable | Passed      |
| TC-13 | BR-13 | Notification defaults to generic message pending Compliance approval | 1. Trigger a customer-facing exception notification before template is Compliance-approved                                            | Customer sees generic "requires additional review" message, not specific exception detail                                                        | Not yet testable — Compliance review still pending (open item from Elicitation)         | Not Started |
