

Defect ID	Related TC	Description	Severity	Status	Resolution
D - 01	TC-03	Customer status page shows "last updated" timestamp in server timezone instead of customer's local time, causing minor confusion during manual review	Low	Open	Fix scheduled for next sprint; not a blocker for continued UAT on other stories
D-02	TC-10	Exception classification correctly falls back to "Uncategorized Manual Review" per ER-09, but the case doesn't automatically notify Operations Manager that a new rule may be needed currently requires someone to notice it manually	Medium	Open	Raised with Product Manager as a possible addition to FR-10; not required for pilot go-live, tracked for Phase 2 consideration
D-03	TC-12	Whitespace-only resolution reason was initially accepted by validation (only checked for empty string, not whitespace)	Medium	Resolved	Validation logic corrected to trim and check minimum 10 non-whitespace characters; retested and passed
D-04	TC-07	Document request occasionally named a generic "supporting document" instead of the specific required item, when more than one document type was missing simultaneously	Medium	Resolved	Logic corrected to list all missing items individually rather than defaulting to a generic label when multiple were missing; retested and passed.
D-05	TC-01	Completeness check correctly flagged a missing document, but flagged it twice (duplicate entry) in the missing items list shown to the customer	Low	Resolved	De-duplication logic added to the missing items list; retested and passed.
